First you need to insert a new item in the navigation

```
<!-- Begin MENU -->
<div id="coda-nav-1" class="coda-nav">
    <ul>
        <li class="tab1"><a href="#1">Home</a></li>
        <li class="tab2"><a href="#2">Services</a></li>
        <li class="tab3"><a href="#3">Work</a></li>
        <li class="tab4"><a href="#4">Contact</a></li>

        <li class="tab5"><a href="#5">New section</a></li>

    </ul>
</div><!-- End MENU -->
```

Then you have to enter another panel at the end (in our case after the panel with id = "four")

```
<div class="panel" id="five">
    <div class="panel-wrapper">

    <!--Content of the new section-->

    </div>
</div>
```

The final step you need to edit the file fade.js as follows:

```javascript
$(document).ready(function(){
    $("li.tab1").click(function () {
      $("#one").fadeTo("fast", 1);
      $("#two").fadeTo("fast", 0);
      $("#three").fadeTo("fast", 0);
      $("#four").fadeTo("fast", 0);

      $("#five").fadeTo("fast", 0);
    });

    $("li.tab2").click(function () {
      $("#one").fadeTo("fast", 0);
      $("#two").fadeTo("fast", 1);
      $("#three").fadeTo("fast", 0);
      $("#four").fadeTo("fast", 0);

      $("#five").fadeTo("fast", 0);
    });

    $("li.tab3").click(function () {
      $("#one").fadeTo("fast", 0);
      $("#two").fadeTo("fast", 0);
      $("#three").fadeTo("fast", 1);
      $("#four").fadeTo("fast", 0);

      $("#five").fadeTo("fast", 0);
    });

    $("li.tab4").click(function () {
      $("#one").fadeTo("fast", 0);
      $("#two").fadeTo("fast", 0);
      $("#three").fadeTo("fast", 0);
      $("#four").fadeTo("fast", 1);

      $("#five").fadeTo("fast", 0);
    });

    $("li.tab5").click(function () {
      $("#one").fadeTo("fast", 0);
      $("#two").fadeTo("fast", 0);
      $("#three").fadeTo("fast", 0);
      $("#four").fadeTo("fast", 0);

      $("#five").fadeTo("fast", 1);
    });
});
```
